

Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Webscraping to Extract Tesla Revenue Data
- Question 3: Use yfinance to Extract Stock Data
- Question 4: Use Webscraping to Extract GME Revenue Data
- Question 5: Plot Tesla Stock Graph
- Question 6: Plot GameStop Stock Graph

Estimated Time Needed: 30 min

```
In [1]: pip install yfinance==0.1.67
#pip install pandas==1.3.3
#pip install requests==2.26.0
!conda install bs4==4.10.0 -y
#pip install plotly==5.3.1

'!conda' is not recognized as an internal or external command,
operable program or batch file.
```

```
In [2]: import yfinance as yf
import pandas as pd
import requests
from bs4 import BeautifulSoup
import plotly.graph_objects as go
from plotly.subplots import make_subplots
```

Define Graphing Function

In this section, we define the function `make_graph`. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
In [3]: def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing = .3)
    stock_data_specific = stock_data[stock_data.Date <='2021-06-14']
    revenue_data_specific = revenue_data[revenue_data.Date <='2021-06-14']
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date, infer_datetime_format=True), y=stock_data_specific.Close.astype("float"), name="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date, infer_datetime_format=True), y=revenue_data_specific.Revenue.astype("float"), name="Revenue"), row=2, col=1)
    fig.update_xaxes(title_text="Date", row=1, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
    fig.update_layout(showlegend=False,
                      height=900,
                      title=stock,
                      xaxis_rangeslider_visible=True)
    fig.show()
```

Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a `ticker` object. The stock is Tesla and its ticker symbol is `TSLA`.

```
In [24]: tesla = yf.Ticker('TSLA')
```

Using the `ticker` object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
In [5]: tesla_data = tesla.history(period="max")
```

Reset the index using the `reset_index(inplace=True)` function on the `tesla_data` DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
In [6]: tesla_data.reset_index(inplace = True)
tesla_data.head()
```

```
Out[6]:
```

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2010-06-29	3.800	5.000	3.500	4.778	93831500	0	0.00
1	2010-06-30	5.158	6.084	4.660	4.766	85935500	0	0.00
2	2010-07-01	5.000	5.184	4.054	4.392	41094000	0	0.00
3	2010-07-02	4.600	4.620	3.742	3.840	25699000	0	0.00
4	2010-07-06	4.000	4.000	3.166	3.222	34334500	0	0.00

Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the `requests` library to download the webpage <https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue>. Save the text of the response as a variable named `html_data`.

```
In [7]: url = "https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue"
html_data = requests.get(url).text
```

Parse the html data using `beautiful_soup`.

```
In [8]: soup = BeautifulSoup(html_data, "html.parser")
soup.find_all('title')
```

```
Out[8]: [<title>Tesla Revenue 2010-2022 | TSLA | MacroTrends</title>]
```

Using `BeautifulSoup` or the `read_html` function extract the table with `Tesla Quarterly Revenue` and store it into a dataframe named `tesla_revenue`. The dataframe should have columns `Date` and `Revenue`.

► Click here if you need help locating the table

```
In [9]: tesla_revenue = pd.DataFrame(columns = ['Date', 'Revenue'])

for row in soup.find_all("tbody")[1].find_all("tr"):
    col = row.find_all("td")
    date = col[0].text
    revenue = col[1].text.replace("$", "").replace(",","")
    tesla_revenue = tesla_revenue.append({("Date": date, "Revenue": revenue)}, ignore_index = True)
```

Execute the following line to remove the comma and dollar sign from the `Revenue` column.

```
In [12]: tesla_revenue = tesla_revenue.rename(columns={"Tesla Quarterly Revenue(Millions of US $)": "Date", "Tesla Quarterly Revenue(Millions of US $).1": "Revenue"}) #Rename df columns to 'Date' and 'Revenue'
tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace(',|\$','') # remove the comma and dollar sign from the 'Revenue' column
tesla_revenue.head() # Display df
```

```
<ipython-input-12-884927ac939>:2: FutureWarning: The default value of regex will change from True to False in a future version.
tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace(',|\$','') # remove the comma and dollar sign from the 'Revenue' column
```

```
Out[12]:
```

	Date	Revenue
0	2022-03-31	18756
1	2021-12-31	17719
2	2021-09-30	13757
3	2021-06-30	11958
4	2021-03-31	10389

Execute the following lines to remove an null or empty strings in the `Revenue` column.

```
In [13]: tesla_revenue.dropna(inplace=True)
tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the `tesla_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
In [14]: tesla_revenue.tail()
```

```
Out[14]:
```

	Date	Revenue
46	2010-09-30	31
47	2010-06-30	28
48	2010-03-31	21
50	2009-09-30	46
51	2009-06-30	27

Question 3: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a `ticker` object. The stock is GameStop and its ticker symbol is `GME`.

```
In [15]: game_stop = yf.Ticker("GME")
```

Using the `ticker` object and the function `history` extract stock information and save it in a dataframe named `gme_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
In [16]: gme_data = game_stop.history(period="max")
```

Reset the index using the `reset_index(inplace=True)` function on the `gme_data` DataFrame and display the first five rows of the `gme_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
In [17]: gme_data.reset_index(inplace=True)
gme_data.head()
```

```
Out[17]:
```

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2002-02-13	6.480514	6.773400	6.413183	6.766666	19054000	0.00	0.00
1	2002-02-14	6.850828	6.864294	6.682500	6.733000	2755400	0.00	0.00
2	2002-02-15	6.733001	6.749833	6.632000	6.699336	2097400	0.00	0.00
3	2002-02-19	6.665670	6.665670	6.312187	6.430015	1852600	0.00	0.00
4	2002-02-20	6.463682	6.648839	6.413184	6.648839	1723200	0.00	0.00

Question 4: Use Webscraping to Extract GME Revenue Data

Use the `requests` library to download the webpage <https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDriverSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html>. Save the text of the response as a variable named `html_data`.

```
In [18]: url = "https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDriverSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html"
html_data = requests.get(url).text
```

Parse the html data using `beautiful_soup`.

```
In [19]: soup = BeautifulSoup(html_data, 'html.parser')
```

Using `BeautifulSoup` or the `read_html` function extract the table with `GameStop Quarterly Revenue` and store it into a dataframe named `gme_revenue`. The dataframe should have columns `Date` and `Revenue`. Make sure the comma and dollar sign is removed from the `Revenue` column using a method similar to what you did in Question 2.

► Click here if you need help locating the table

```
In [9]: tesla_revenue = pd.DataFrame(columns = ['Date', 'Revenue'])

for row in soup.find_all("tbody")[1].find_all("tr"):
    col = row.find_all("td")
    date = col[0].text
    revenue = col[1].text.replace("$", "").replace(",","")
    tesla_revenue = tesla_revenue.append({("Date": date, "Revenue": revenue)}, ignore_index = True)
```

Execute the following line to remove the comma and dollar sign from the `Revenue` column.

```
In [12]: tesla_revenue = tesla_revenue.rename(columns={"GameStop Quarterly Revenue(Millions of US $)": "Date", "GameStop Quarterly Revenue(Millions of US $).1": "Revenue"}) #Rename df columns to 'Date' and 'Revenue'
tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace(',|\$','') # remove the comma and dollar sign from the 'Revenue' column
tesla_revenue.head() # Display df
```

```
<ipython-input-12-884927ac939>:2: FutureWarning: The default value of regex will change from True to False in a future version.
tesla_revenue["Revenue"] = tesla_revenue["Revenue"].str.replace(',|\$','') # remove the comma and dollar sign from the 'Revenue' column
```

```
Out[12]:
```

	Date	Revenue
0	2022-03-31	18756
1	2021-12-31	17719
2	2021-09-30	13757
3	2021-06-30	11958
4	2021-03-31	10389

Question 5: Plot Tesla Stock Graph

Use the `make_graph` function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is `make_graph(tesla_data, tesla_revenue, 'Tesla')`. Note the graph will only show data upto June 2021.

```
In [22]: make_graph(tesla_data, tesla_revenue, 'Tesla')
```

The graph shows two line charts side-by-side. The left chart, titled 'Historical Share Price', plots Price (\$US) on the y-axis (0 to 800) against Date on the x-axis (2010 to 2021). The right chart, titled 'Historical Revenue', plots Revenue (\$US Millions) on the y-axis (0 to 10k) against Date on the x-axis (2010 to 2021).

The share price chart shows a significant upward trend from around \$10 in 2010 to over \$800 in 2021, with a major spike in late 2020 and early 2021. The revenue chart shows a steady increase from around \$100 million in 2010 to over \$10 billion in 2021, with a major spike in late 2020 and early 2021.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The graph has a light blue background with white grid lines. The share price chart has a light blue background with white grid lines. The revenue chart has a light blue background with white grid lines.

The
